

DANG VY KHOI

Software Engineer | .NET Core | SaaS & Product Development

0931314792 | dangvykhoi@gmail.com | [linkedin.com/in/vykhoi](https://www.linkedin.com/in/vykhoi) | Go Vap, Ho Chi Minh City

Software Engineer with 2+ years of experience building SaaS systems, focused on business workflows and system reliability.

TECHNICAL SKILLS

- Backend & Core:** .NET 8 (ASP.NET Core), C#, **Parallel Processing / Concurrency**, **Middleware**, RESTful APIs, **SignalR**, **Hangfire**.
- Architecture & Security:** **Multi-tenant Architecture (Hybrid Isolation)**, **Row-Level Security (RLS)**, **Rate Limiting**, Clean Architecture, Repository Pattern, Dependency Injection.
- Databases & ORM:** SQL Server, PostgreSQL, **Entity Framework Core**, **LINQ**, **Dapper**, **Query Tuning & Indexing**.
- Frontend & Performance:** **.NET MAUI**, **Blazor**, JavaScript, **IMemoryCache**, **Image Optimization (WebP)**, **SEO Optimization**.
- DevOps & Tools:** Docker (Compose), Linux (Ubuntu), VPS Management, IIS, Cloudflare (DNS/SSL), Git, Unit Testing, **Agile/Scrum**.
- Familiar with:** Redis Caching, Microservices concepts, GraphQL, React.

WORK EXPERIENCE

Software Engineer (.NET) | SaaS Product Development (Independent Team)

March 2024 – Present

Project: Enterprise SaaS CRM/POS Ecosystem for Salon Chains.

- Hybrid SaaS:** Built a **multi-tenant POS/Web/Mobile core**, enabling **scalable hybrid deployment** from shared infrastructure to dedicated environments as clients grow.
- Core Platform:** Developed **high-performance .NET 8 APIs** handling **complex business logic, reporting, and high-volume transactions** (booking, billing, payroll) using **Parallelism, Caching, EF Core, LINQ, and Dapper**; enforcing **rate limiting** and strict CORS policies.
- Client Ecosystem:** Developed **multiple web frontends** (POS system, product sites, client portals) and **.NET MAUI mobile apps** for booking and tracking; optimized performance via **custom middleware (WebP, responsive images)**, **IMemoryCache**, and **SEO practices**.
- Data Isolation:** Secured **100+ branches** using **RLS and JWT auth (access/refresh tokens)** in a **multi-tenant architecture**.
- Payments & Automation:** Integrated **CardPointe** with POS hardware; automated **Payroll, SMS notifications, and Commission workflows** using **Hangfire**.
- Real-time:** Enabled **real-time synchronization** across dashboards, kiosks, and mobile apps using **SignalR**.
- Infra:** Deployed and managed production on **IIS** with **Cloudflare**; ensured stability via **centralized logging** and **unit testing**.

Backend Developer | AEGONA Co., Ltd

July 2023 – January 2024

- Contributed to backend development for **CRM, e-learning, and booking systems** using **ASP.NET Core** and **SQL Server**.
- Worked with both **monolithic and microservices-based systems**, supporting API development and service integration.
- Assisted in **refactoring legacy server-side logic** and **optimizing SQL queries** to improve system response time.
- Collaborated with BAs and team members in **Agile/Scrum** to understand requirements and implement business logic.
- Maintained code consistency by following **Repository Pattern** and standard architectural patterns.

Personal Project: Family-SaaS: Billing & Task Orchestrator (Personal Lab)

- Full-stack System:** Built a decoupled ecosystem (**.NET 8, MAUI, React - basic**) with Repository Pattern and Unit Testing to ensure cross-platform logic consistency (Web, Mobile, API).
- Self-hosted Infrastructure:** Ran a 24/7 Ubuntu server on repurposed hardware with Docker and background jobs.
- DevOps & Network:** Secured external access via **Cloudflare (DNS/SSL)** and **NAT Port Forwarding**; automated deployments with **Jenkins CI/CD** pipelines.

EDUCATION

Ho Chi Minh City Open University | 2020 – 2024 | **Bachelor of Information Technology** | **Graduated with Distinction** | 3 Academic Scholarships

ADDITIONAL INFORMATION

- Technical Curiosity:** Self-hosting a personal lab (Linux, Docker, CI/CD) for continuous experimentation.
- Product Mindset:** Focus on **production stability** and **business value** over theoretical solutions.
- AI-Augmented Development:** Using AI for **debugging, root-cause analysis, and workflow automation**; building structured prompts to improve productivity.
- Sustainable Engineering:** Ensuring **backward compatibility, system stability, and future scalability**.
- Languages:** English – Effective for technical research, documentation, and daily problem-solving.
